concepts Ophthalmic Nursing

The first reference of its kind, An Evidence Base  
for Ophthalmic Nursing Practice alleviates the  
need for every ophthalmic practice area to  
develop diverse, often contradictory, guidelines.  
This book informs guidelines and protocols and  
provides up to date, evidence based information,

covering: condition management (lice  
infestation, conjunctivitis, recurrent corneal  
erosion, removing foreign bodies, chalazion, pain  
management, acute glaucoma); techniques  
(padding, taking eye swabs, irrigation,  
administering eye drops, keratometry); and  
other topics, including papillary dilation,  
standards for driving, screening, topical  
anaesthesia and the eye, and prescribing.  
Penguin nursing revision notes cover the  
syllabus for all nurse in general training. It  
covers all aspects of ophthalmic nursing from  
common operations and drugs to patient care, in  
the light of rapid recent changes in technology  
and microsurgery. In particular, as an increasing  
number of patients are now short-stay or out-  
patients, emphasis is given to the role of nurses  
as teachers and advisers, providing information  
and continuity of care both before and after the  
hospital admission. This is a conceptual book  
challenging the assumptions that health and  
social care professionals may make when caring

for a person who has a visual impairment. Each chapter of this book has been peer reviewed twice by a variety of health care professionals, lecturers and social care professionals. There have been many changes in the arena of ophthalmic care since the last edition of this book was published. This fourth edition has been fully updated and revised to reflect these recent advances in care, and incorporates new information on patient care, contexts of care, and expanded roles. It includes a greater emphasis on the primary care setting, more information on issues such as new treatments, infection control, and use of technology, greater detail on theatre, anaesthetics and recovery, and new information on the role of other healthcare professionals involved in ophthalmic care. Now with colour illustrations throughout, this accessible text also includes evidence-based procedure guidelines and reflective practice exercises that enable the reader to apply the learning in practice. Written by highly

regarded authors based at The University of Manchester and Manchester Royal Eye Hospital, *Ophthalmic Nursing* is a must-have for every eye department. Excerpt from *The Ophthalmic Nurse* It is not intended for medical students or practitioners, but is written to serve as a practical guide for nurses who lack special training in the management of ophthalmic cases. Care has been taken to avoid scientific terms and expressions, and to present the subject in a complete but condensed form and in a manner that may be readily understood by all. It is in no way a treatise on diseases of the eye, but has to do only with those facts which are necessary for a nurse to know if she expects to render intelligent assistance to the oculist and efficient care to the patient. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology

to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works. Ophthalmic nurse practitioners face many challenges today, owing to the effects of demographic change, advancing technology and research, and increasing government legislation. This book contains a wealth of information related to the nursing management of people with various ophthalmic conditions. At the same time, it encourages ophthalmic nurses and allied healthcare professionals to think critically about the wider political and professional issues impacting on their everyday practice. The last three decades have seen major advances in the care of people with ophthalmic conditions in all ag Written by

an international team of ophthalmic practitioners, this authoritative book is a vital resource not only for ophthalmic professionals, but for any healthcare professional who cares for patients with eye problems. In the ten years since the first edition was published, practice has moved on, as has the evidence for practice. This second edition draws on the passion and goodwill of the original team of authors, complemented by other colleagues, to fully revise and update the text in line with new findings, new practice and new and exciting treatments. The book is broadly divided into three sections. The first section considers the structure and function of the eye, as well as the basic principles of ophthalmology and eye examination. The second section considers patient care in diverse settings, as well as work-related issues and patient education. It also includes two entirely new chapters on eye banking and global eye health. The third section takes a systematic approach to patient care,

working from the front to the back of the eye, discussing some of the common disorders affecting each structure (such as the lens or cornea) or group of structures (such as the eyelids or lacrimal drainage system). The book concludes with a very useful glossary of ophthalmic terms. Some aspects of practice discussed in the text are, of necessity, UK based, but these are clearly indicated and, wherever possible, principles (rather than specifics) are addressed and readers are directed to local policies and interpretations. The first edition of this book became a core text for ophthalmic nursing, in particular, and for the education of ophthalmic nurses across the world. This new edition will provide a comprehensive, up-to-date, evidence-based resource for all ophthalmic healthcare professionals. Contents include: • Physiology of vision • Optics • Pharmacology • Examination of the eye • Visual impairment • Patient education • Work and the eye • Care of the adult ophthalmic patient in an inpatient

setting • The care of the child undergoing ophthalmic treatment • Developments in day care surgery for ophthalmic patients • Ophthalmic theatre nursing • The care of patients presenting with acute problems • Eye banking • Global eye health • The eyelids and lacrimal drainage system • The conjunctiva • The cornea • The sclera • The lens • The uveal tract • The angle and aqueous • The retina and vitreous • The orbit and extraocular muscles • Visual and pupillary pathways and neuro-ophthalmology • The eye and systemic disease Ophthalmic Nursing provides an overview for those just setting out in a role within ophthalmic nursing. It includes basic and comprehensible anatomy and physiology - the foundations for understanding how the eye functions and why and how problems occur - and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure guidelines and the inclusion of reflective activities in most chapters allows

readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly and included new colour images and diagrams. References, further reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the 'go-to' source for those caring for the ophthalmic patient. Ophthalmic nurse practitioners face many challenges today, owing to the effects of demographic change, advancing technology and research, and increasing government legislation. This book contains a wealth of information related to the nursing management of people with various ophthalmic conditions. At the same

time, it encourages ophthalmic nurses and allied healthcare professionals to think critically about the wider political and professional issues impacting on their everyday practice. The last three decades have seen major advances in the care of people with ophthalmic conditions in all ag ... Whilst this book is primarily compiled for nurses who care for patients with eye disease, it will be useful to other health professionals who are also interested in the holistic care of such patients, e.g. opticians, orthop tists, social workers and junior medical staff. The care is presented as a systematic approach to the more common actual and potential problems. Typically, a problem is identified with a desired outcome and the nursing interventions possible to achieve this. Evaluation has not been included as this is dependent on an identified time limit for outcomes to be achieved which is individual to each patient. Part One covers the general aspects of ophthalmie care in the various situations where patients are nursed, e.g.

casualty, theatre, wards. Part Two is based on a medical model, where each section of the eye is studied separately; the applied physiology of that part of the eye; the more common conditions affecting it; the possible medical management of the condition and the nursing care of the patient taking into account the medical prescription. The list of medical conditions is not exhaustive, and only a general guideline of medical management is given as far as it influences nursing care. A list of widely available books for further reference to ocular pathology and medical management is given in the Appendix. LEARN THE LANGUAGE OF OPHTHALMOLOGY before your rotation. . . Ophthalmology: A Brief Review for Nurses Medical Students, and Medical Technicians is a succinct primer for all members of the ophthalmic healthcare team. Listening to the digital audio of this book is a fast and efficient review or introduction to ophthalmology. Learning ophthalmology begins with learning

the language of ophthalmology. Therefore, this text is laid out in a simple format with a disease and its definition and possible treatments. This text was originally written as a "Brief Review" for nurses studying for the Certification Examination for Ophthalmic Registered Nurses (CEORN), addressing many subjects listed by the NCBORN 2007 Handbook; and serves as an excellent introduction or brief review to ophthalmology. This and other works also available in Digital Audio at [www.ApolloAudiobooks.com](http://www.ApolloAudiobooks.com). The book aims to increase the knowledge and skills of the ophthalmic practitioner at any level. Each section ends with a reflective / question section allowing the reader to consider their own practice and learning needs. Areas covered include, anatomy & physiology, a dynamic range of ophthalmic conditions with their associated investigations, management and care. Further chapters include the visual sciences, pharmacology and advice for practitioners and

mentors alike. This handbook of ophthalmic nursing standards and procedures has been developed to assist healthcare professionals working in a wide range of ophthalmic settings, and also to provide the patient with safe and consistent ophthalmic nursing care. Ophthalmic care is constantly changing and progressing, with new technical roles being introduced all the time. The authors discovered within their own unit that new healthcare professionals, both registered and non-registered, were often shown slightly different ways of doing things by more experienced members of the team, which led to confusion. They felt it was a bit like driving; bad habits can easily slip into everyday practice. For this reason, they developed standards of care to act as a benchmark for the ophthalmic practitioner. Written in response to a widely expressed need for greater clarity and consistency, this highly regarded book offers a comprehensive one-stop resource for all ophthalmic practitioners, whether they are

registered nurses, healthcare assistants or ophthalmic technicians. This new edition has been revised to make the text even clearer and bring all the guidance up to date, covering communication, visual acuity testing, ocular medications, the ophthalmic outpatient department, biometry, the ophthalmic accident and emergency department, the slit lamp and tonometry, additional standards using specific equipment, and suggested documentation for providing evidence of development and competence. Sections include: Communication Visual Acuity Testing Ocular Medications The Ophthalmic Outpatient Department Biometry The Ophthalmic Accident and Emergency Department Slit Lamp and Tonometry Additional Standards Using Specific Equipment Next Steps Using Standards Written by an author who has worked at the frontline of ophthalmic nursing care for over 25 years, this is a comprehensive and highly practical guide to the treatment and care of a wide variety of eye conditions, ranging

from minor eye irritations to chronic diseases and conditions requiring major surgery. John Cooper draws on many years of experience in theatre, daycase and outpatients as an advanced nurse practitioner and oculoplastic nurse practitioner (and, previously, as a nurse practitioner) to summarise the most important points about every condition the ophthalmic and oculoplastic practitioner is likely to encounter. The book also covers all the latest developments in oculoplastic surgery, oculoprosthetics and the care of the patient with oculoplastic-related issues. Contents include:

- Advanced and specialised roles within ophthalmic and oculoplastic nursing in the UK
- Entropion and ectropion
- Assessment and management of upper eyelid blepharoptosis
- Floppy eyelid syndrome
- The eyelashes and trichiasis
- Blepharitis, meibomian gland disease and dry eyes
- The lacrimal system and dacryocystorhinostomy
- Thyroid eye disease
- Enucleation and evisceration
- Exenteration and

socket wound management

- Emergency oculoplastic care
- Facial palsy and related care
- The orbit and related disorders
- Oculoplastic surgical competencies

This third edition of *Ophthalmic Nursing* reflects recent advances in diagnosis and treatment and developments in the role of the ophthalmic nurse. It includes evidence-based procedures for care of ophthalmic patients on the ward, in outpatients, day care and casualty. The third edition includes more on professional issues and specialist nursing roles, differentiates adult and paediatric issues, and places more emphasis on assessment skills, pain management, infection control, day surgery, psychological aspects and links to primary care. *Ophthalmic Nursing* is an invaluable resource for all nurses involved in ophthalmic care and an essential text for courses in ophthalmic nursing. Glaucoma is one of the leading causes of blindness worldwide. Robust screening alongside early diagnosis and prompt management is essential for preserving vision.

Advanced ophthalmic nurse practitioners, optometrists and orthoptists are increasingly becoming part of a multi-disciplinary team approach that is designed to provide the best outcomes for our patients. This full-colour book has been written by experienced ophthalmologists and optometrists, and details all that a practitioner needs to know about the condition. It will also serve as a useful reference for junior ophthalmic trainees and medical students.
