Volume 48 of *Advances in Child Development and Behavior* includes chapters that highlight some of the most recent research in the field of developmental psychology. Each chapter provides in-depth discussions, and this volume serves as an invaluable resource for developmental or educational psychology researchers, scholars, and students. Chapters highlight some of the most recent research in the area. A wide array of topics are discussed in detail. Education professor Mark R. O'Shea introduces a comprehensive protocol for meeting state standards and offers strategies for standards-based curriculum design, assessment, supervision, and professional development. The need for a cohesive and comprehensive curriculum that intentionally connects standards, instruction, and assessment has never been more pressing. For educators to meet the challenging learning needs of students they must have a clear road map to follow throughout the school year. *Rigorous Curriculum Design* presents a carefully sequenced, hands-on model that curriculum designers and educators in every school system can follow to create a progression of units of study that keeps all areas tightly focused and connected. Turning the attention to the temporal as well as the more familiar spatial dimensions of mobility, this volume focuses on the momentum for and temporal composition of mobility, the rate at which people enact or deploy their movements as well as the conditions under which these moves are being marshalled, represented and contested. This is an anthropological exploration of temporality as a form of action, a process of actively modulating or responding to how people are moving rather than the more usual focus in mobility studies on where they are heading. Historically, teachers have exercised considerable autonomy in the day-to-day learning that occurs in their classrooms. Now, it is growing increasingly rare for a teacher to experience this type of professional freedom. In response to high-stakes testing, national and state academic content standards, and most recently the common core standards, pacing guides are one of the more recent devices schools are using to implement and monitor curriculum. The purpose of this research project is to investigate teacher opinion toward these pacing guides. An online survey called the Pacing Guide Survey was delivered to secondary regular and special education teachers in core subject areas of mathematics, science, social studies, and language arts. The teachers were asked about whether or not they use pacing guides, their attitude and comfort level in using pacing guides, as well as: Information concerning the population of their high school, such as demographics, enrollment, and single or multiple high schools; Building level factors, such as professional development initiatives, methods of curriculum monitoring, and pacing guide development and revisions processes; teacher

factors, such as years teaching, years using pacing guides, confidence in content area, and educational background. Administrators were also interviewed to form a complete picture of pacing guide development and implementation in the secondary education environment. Quantitative data were analyzed using bivariate Spearman's rank order correlation and qualitative data were analyzed using a combination of thematic data analysis and quasi-statistical methods. Recommendations based on the data collected are: Teachers should be provided with the flexibility to address student needs in the classroom. Teacher input into pacing guide development, implementation, and revision process is necessary to ensure that student needs are addressed. Team autonomy is key and teacher teams need to be provided with the necessary support structure to provide meaningful learning experiences for their students. This volume will be a valuable resource to instructors who teach in the fields of teacher education, social studies, educational leadership, social work, social, cultural and philosophical foundations of education, sociology, political science, and global studies as well as their students. Due to the volume's international focus, we also expect that it will be purchased by a large number of university libraries, researchers, educators and others in a number of countries.

This book showcases strategies which support teachers and principals as they implement high standards for students. At the same time, it demonstrates how to meet the needs of diverse learners. In recent years, funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large-scale studies with experimental and quasi-experimental designs looking for 'objective truths'. Educational researchers have recently begun to use large-scale studies to understand what really works, from developing interventions, to validation studies of the intervention, and then to efficacy studies and the final "scale-up" for large implementation of an intervention. Moreover, modeling student learning developmentally, taking into account cohort factors, issues of socioeconomic, local political context and the presence or absence of interventions requires the use of large data sets, wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures, but these methods are not yet common knowledge in the mathematics education community. In fact, currently there is no volume devoted to discussion of issues related to large-scale studies and to report findings from them. This volume is unique as it directly discusses methodological issue in large-scale studies and reports empirical data from large-scale studies. How much of the world's water is found in the oceans? How many volcanoes erupt each year? How was the Grand Canyon formed? Read this book to find out! Children also learn about bodies of water and their importance to people. Each spread includes introductory text, colorful illustrations with detailed captions, and photographs that show real-world examples of the featured topic. Puzzle pages, fun facts, and true/false quizzes appear at the end of each volume. This second edition is a ground-breaking clinical text with a strong emphasis on rigorous evidence. Leaders in the field discuss best practice in the light of systematic reviews and randomised control trials, and how best to treat where the information is less clear. There are three types of teacherpreneurs: classroom, business, and consultant teacherpreneurs. Classroom teacherpreneurs inspire and motivate students to be the best they can be using outside resources, business teacherpreneurs teach students to become entrepreneurs, and consultant teacherpreneurs are usually former teachers who own a consulting business and go into schools to assist with improving academics. Each plays an important and different role within the educational system in the United States and one without the other would not assist students in gaining academic success. These individuals are the mainstay of educational systems, and without them, school systems would fail. Enhancing Teaching and Leadership Initiatives With Teacherpreneurs: Emerging Research and Opportunities is a critical scholarly resource that explores the characteristics and models of a teacherpreneur, their advantages and disadvantages, and examines how they can be used by current classroom teachers and school administrators to

improve and enhance the teaching profession. Featuring a wide range of topics such as curriculum design, student outcomes, and ethics, this book is essential for teachers, educational consultants, school administrators, academicians, researchers, and students.
