*Nonsmooth Optimization in Honor of the 60th Birthday of Adil M. Bagirov* May 20 2022 The aim of this book was to collect the most recent methods developed for NSO and its practical applications. The book contains seven papers: The first is the foreword by the Guest Editors giving a brief review of NSO and its real-life applications and acknowledging the outstanding contributions of Professor Adil Bagirov to both the theoretical and practical aspects of NSO. The second paper introduces a new and very efficient algorithm for solving uncertain unit-commitment (UC) problems. The third paper proposes a new nonsmooth version of the generalized damped Gauss–Newton method for solving nonlinear complementarity problems. In the fourth paper, the abs-linear representation of piecewise linear functions is extended to yield simultaneously their DC decomposition as well as the pair of generalized gradients. The fifth

paper presents the use of biased-randomized algorithms as an effective methodology to cope with NP-hard and nonsmooth optimization problems in many practical applications. In the sixth paper, a problem concerning the scheduling of nuclear waste disposal is modeled as a nonsmooth multiobjective mixed-integer nonlinear optimization problem, and a novel method using the two-slope parameterized achievement scalarizing functions is introduced. Finally, the last paper considers binary classification of a multiple instance learning problem and formulates the learning problem as a nonconvex nonsmooth unconstrained optimization problem with a DC objective function.

*Transforming Reconfigurable Systems: A Festschrift Celebrating The 60th Birthday Of Professor Peter Cheung* Apr 18 2022 Over the last three decades, Professor Peter Cheung has made significant contributions to a variety of areas, such as analogue and digital computer-aided design tools, high-level synthesis and hardware/software codesign, low-power and high-performance circuit architectures for signal and image processing, and mixed-signal integrated-circuit design. However, the area that has attracted his greatest attention is reconfigurable systems and their design, and his work has contributed to the transformation of this important and exciting discipline. This festschrift contains a unique collection of technical papers based on presentations at a workshop at Imperial College London in May 2013 celebrating Professor Cheung's 60th birthday. Renowned researchers who have been inspired and motivated by his outstanding research in the area of reconfigurable systems are brought together from across the globe to offer their latest research in reconfigurable systems. Professor Cheung has devoted much of his professional career to Imperial College London, and has served with distinction as the Head of Department of Electrical and Electronic Engineering for several years. His outstanding capability and his loyalty to Imperial College and the Department of Electrical and Electronic Engineering are legendary. Professor Cheung has made tremendous strides in ensuring excellence in both research and teaching, and in establishing sound governance and strong financial endowment; but above all, he has made his department a wonderful place in which to work and study.

*Continuous Advances in QCD 2002* Feb 26 2023 The symposium and workshop "Continuous Advances in QCD / Arkadyfest" was the fifth in the series of meetings organized by the William I Fine Theoretical Physics Institute at the University of Minnesota. This meeting brought together leading researchers in high-energy physics to exchange the latest ideas in QCD and gauge theories at strong coupling at large. It honored the 60th birthday of Professor Arkady Vainshtein, and the papers included in this proceedings volume also look back on the history of the subjects in which Arkady played such a central role: applications of PCAC, penguins, invisible axions, QCD sum rules, exact beta functions, condensates in supersymmetry, powerful heavy quark expansions, and new anomalies in 2D SUSY theories. The current status of these subjects was summarized in several excellent presentations that also outlined a historical perspective. A number of papers from leading researchers in the field present new developments and ideas in modern areas of study, such as the cosmological constant problem in extra-dimension theories, supersymmetric monopoles, solitons and confinement, AdS/CFT correspondence, and high density QCD. Contents: Perturbative and Nonperturbative QCD: Electromagnetic Form Factor of the Pion (H Leutwyler) Multiple Uses of the QCD Instantons (E V Shuryak) CP-Violation and Mixing in Charmed Mesons (A A Petrov) General Aspects of QCD and the Standard Model: Probing New Physics: From Charm to Superstrings (M K Gaillard) Dynamics of QCD in a Strong Magnetic Field (V A Miransky) On Mixed Phases in Gauge Theories (V L Chernyak) Gauge Dynamics at High Temperature and Density: What QCD Tells Us About Nature (F Wilczek) Domain Walls and Strings in Dense Quark Matter (A R Zhitnitsky) Topological Field Configurations, Dynamics in Supersymmetric Models, and Theoretical Issues: Non-Abelian Monopoles, Vortices and Confinement (K Konishi) Nonperturbative Solution of Supersymmetric Gauge Theories (J R Hiller) Testing ADS/CFT Correspondence with Wilson Loops (K Zarembo) Cosmology and Axions: Axions: Past, Present, and Future (M Srednicki) QCD Vacuum and Axions: What's Happening? *Symmetries in Nuclear Structure* Jan 28 2023 The Highly Specialized Seminar on “Symmetries in Nuclear Structure”, held in Erice, Italy, in March 2003, celebrated the career and the remarkable achievements of Francesco Iachello, on the occasion of his 60th birthday. Since the development of the interacting boson model in the early 1970s, the ideas of Iachello have provided a variety of frameworks for understanding collective behaviour in nuclear structure, founded on the concepts of dynamical symmetries and spectrum-generating algebras. The original ideas, which were developed for the description of atomic nuclei, have now been successfully extended to cover spectroscopic behaviour in other fields, such as molecular or hadronic spectra. More recently, the suggestion by Iachello of critical point symmetries to treat nuclei in shape/phase transitional regions has opened an exciting new front for both theoreticians and experimentalists. The talks presented at the meeting covered many of the most active forefront areas of nuclear structure as well as other fields where ideas of symmetries are being explored. Topics in nuclear structure included extensive discussions on dynamical symmetries, critical point symmetries, phase transitions, statistical properties of nuclei, supersymmetry, mixed symmetry states, shears bands, pairing and clustering in nuclei, shape coexistence, exotic nuclei, dipole modes, and astrophysics, among others. In addition, important sessions focused on talks by European laboratory directors (or their representatives) outlining prospects for nuclear structure, and the application of symmetry ideas to molecular phenomena. Finally, a special lecture by Nobel laureate Alex Mueller, on s and d wave symmetry in superconductors, presented a unique insight into an allied field.
